## REACH Declaration

The REACH regulation entered into force on 1st June 2007. Regarding human health and environment the target is to manufacture and to use only safe substances inside the EU.

All substances and preparations manufactured or imported for more than 1 ton/year will have to be tested and analyzed for risk.

The conformity to REACH regulation is phased with different deadlines until 2018.

The RISE Group designs, manufactures and sells lighting technical products. In normal applications these products will not intentionally release any substances.

Our production units do not manufacture or import substances concerned by REACH.

Considering the terms of the regulation RISE manufactures "articles" and is "downstream-user".

RISE hasn't to register substances and hasn't to establish safety data sheets. We will check that our suppliers will comply to REACH requirements for all materials and substances we use.

RISE was always committed to supply it's customers with environmental friendly products. RISE will also comply to REACH regulation.

As needed, RISE will provide it's customers with information about the chemicals of "very high concern" used in our products. First analysis results shows that we do not use such substances.
